

**We are looking for new employees to strengthen our team:**

## **Technical assistant R&D (m/w/d)**

### **Duties and responsibilities:**

Your area of responsibility includes the significant participation in the documented implementation of medical device regulations as well as in the development and design validation of medical devices. You support the development department in the creation of technical documentation and revise development documents in connection with changes and further developments. You will carry out tests on and with medical products and develop product-specific documents. You will work together with product developers as well as external test laboratories and service providers.

### **Your Profile:**

You have qualified vocational training as a technician or a comparable professional training, whereby experience in plastics processing and processing will benefit you. You have good PC and user skills in MS Office and are characterized by teamwork and quality awareness. Knowledge of English is an advantage.

### **What you can expect:**

We offer you a responsible, varied, and interesting job in a reputable, successful, and growing company with flat hierarchies for short decision-making processes. For your personal well-being, we offer to you a lunch allowance, free beverages and fresh fruit, and regular back massages by a local physiotherapy practice.
